

Ethics in Transformative Research

Module of *Transformative Research for Societal Impact - A Practical Introduction to Transformative Research Methodologies*.

Workshop Overview

The mission of the course this module is a part of is to capacitate and empower next-generation researchers with knowledge of perspectives, concepts, methods, tensions (ethical, methodological, unexpected), and case studies to engage (creatively, appropriately, purposefully, productively) through transformative academic research with 'matters of care'.

- **Next generation researchers:** recognizing the higher-leverage of working with younger researchers, we are targeting master's students, PhDs and ECRs at EUR
- **transformative academic research:** an approach to academic research which pursues societal transformation through either the means or the outcomes of the research, as formulated in the 6-pillar approach outlined in the DIT working paper
- **matters of care:** concerns/circumstances/problems to which they have authentic/caring connection)

Workshop Learning Outcomes include:

1. To understand different ways to reflect on ethical dilemmas in research.
2. To apply different ethical theories to transformative research dilemmas.

This workshop is designed to be given within a 1.5 to 2 hour timeframe. An optional round 3 is offered for longer workshops.

Workshop Required Resources

- Projector for ppt
- Print out of dilemma role play game
- Flip chart or designated place to collect dilemmas/ recommendations

Workshop Script

Section	Slide	Description	Action	Time
Framing	1-4	Welcome Aim of workshop		5'
	5	Introduce Ethical Dilemmas		5'
Share their dilemmas	6	What ethical dilemmas have you encountered in your research? - Confirm it is applicable - If not a dilemma, then what is it? - We prepare 2 dilemmas as back up (from Julia's ethics paper)	Ask questions, give time to think and answer.	15'
		Select shared dilemmas to use in groups	It is important to confirm if a dilemma is shared or if it does not meet the criteria.	

Commented [RW1]: 1. Framing / 2. sharing dilemmas can be reversed to make it more engaging/ bigger hook for participants

Commented [KB2]: for the discussion form the different ethical perspective, it can also work well if it is not a 'dilemma' in the strict sense

Commented [JW2R2]: So we can be less strict around this

Role Play	7 – 8	Present Dilemma Role Play Game and a brief overview of which ethical theories are included.	Break your participants into groups. Check that each group has a card deck.	5'
Role Play	9	Round 1: Play through 1 dilemma in small groups (3-4 people) - From perspective of 1 ethical theory each - They use the questions/prompts for each theory from infographic	Walk around and check for understanding or give feedback.	20'
	9	Round 2: Group members choose new ethical theory - Approach same dilemma from different perspective	Announce time to change theories	15'
	10	Optional Round 3: Compare or debate within each group using 2 or 3 of the theories.		<i>Option to add 20'</i>
	11	Reflect in groups on 2 questions: 1. What were your main insights? 2. What was helpful for your research? 3. How will you apply this to your own research?	Remind groups to discuss the reflection questions together.	10'
Plenary	12	Reflection Q's Please share an insight you have from your group - Share main insights from group What additional knowledge or other perspectives do you need?		10'
		What could your ethical review board do to help you in dealing with these dilemmas? Collect recommendations from session participants		10'
	13	Thank participants for their participation Remind that you will follow up with relevant materials via email.		

Commented [RW3]: resource idea: make card deck to have cards with name of theory and prompting questions.

participants can 'draw their card' which is the theory they use to analyze the dilemma.

workshop wouldn't be dependent on the cards so it could be replicated easily

Commented [JW3R2]: oh that would be just perfect

Commented [RW3R3]: [Workshop Resource_Ethics in TR](#)
