

S3 File. Results of balance for alternatives in designed questionnaire.

Block	Scenario	Drug	Antidote	Food-drug	Monitoring	Bleeding	Stroke	AMI	Cost	Dominant checking*
1	1	A	1	1	3	3	2	0	0	3
		B	1	0	0	0	3	1	3	3
	2	A	0	1	2	0	0	0	1	1
		B	0	1	1	1	0	0	2	2
	3	A	0	0	1	1	1	2	2	1
		B	1	0	2	1	2	2	1	3
	4	A	0	0	3	2	3	3	3	3
		B	0	0	1	3	3	2	0	1
	5	A	1	0	1	3	2	2	3	3
		B	1	0	0	2	2	3	0	1
	6	A	1	1	0	0	3	3	1	3
		B	1	0	3	3	1	1	2	3
	7	A	0	1	2	0	1	0	2	2
		B	0	1	3	0	0	0	1	1
	8	A	1	0	0	3	0	1	0	2
		B	0	1	1	2	1	3	3	5
2	1	A	0	1	0	2	2	2	0	1
		B	1	1	1	3	2	0	3	4
	2	A	1	0	1	3	1	3	1	1
		B	1	0	2	1	3	3	2	3
	3	A	1	0	2	1	3	2	1	2
		B	1	1	0	2	2	2	2	3
	4	A	1	1	3	2	2	3	0	3
		B	1	0	0	3	0	3	3	2
	5	A	0	0	1	2	1	1	3	2
		B	0	0	2	1	1	2	0	2
	6	A	1	1	3	0	0	1	2	2
		B	0	1	3	0	1	1	1	1
	7	A	0	0	0	1	3	1	3	1
		B	0	1	2	2	3	1	0	3

	8	A	0	1	2	1	0	0	2	2
		B	0	1	3	0	0	0	1	1

Food-drug indicates food-drug interaction; monitoring indicates the frequency of blood monitoring; bleeding indicates the risk of major bleeding; stroke indicates the risk of stroke (ischemic/hemorrhagic) or systemic embolism; AMI indicates the risk of acute myocardial infarction; cost indicates monthly out-of-pocket cost. RMB indicates Ren Min Bi, the unit of Chinese currency.

*The value in dominant checking represents the number of dominated attributes for one alternative in specific scenarios. All levels of the attributes would be the same if the values were all 0 in the same scenario (which is impossible for trade-offs). One alternative would be dominated if its value was greater than 0, and the other one was 0.

Levels for antidote and food-drug interaction is indicated by “Yes” if 1, “No” if 0; levels for the frequency of blood monitoring is indicated by “no need” if 0, “every 6 months” if 1, “every 3 months” if 2, “every 1 month” if 3; levels for the risk of major bleeding is indicated by “0.7%” if 0, “3.1%” if 1, “5.5%” if 2, “7.8%” if 3; levels for the risk of stroke or systemic embolism is indicated by “0.6%” if 0, “3.2%” if 1, “5.8%” if 2, “8.4%” if 3; levels for the risk of acute myocardial infarction is indicated by “0.2%” if 0, “1.0%” if 1, “1.8%” if 2, “2.5%” if 3; levels for out-of-pocket is indicated by “0 RMB” if 0, “120 RMB” if 1, “240 RMB” if 2, “360 RMB” if 3.
