

NAME OF THE ORGANISM: **Grapevine leafroll-associated virus 3 (GLRAV3)**

GENERAL INFORMATION ON THE PEST

Name as submitted in the project specification (if different to the preferred name):

Pest category: **Viruses and viroids**

1- Identity of the pest/Level of taxonomic listing:

Is the organism clearly a single taxonomic entity and can it be adequately distinguished from other entities of the same rank? **Yes**

Is the pest defined at the species level or lower?: **Yes**

Can listing of the pest at a taxonomic level higher than species be supported by scientific reasons or can species be identified within the taxonomic rank which are the (main) pests of concern?

- **Not relevant: Vine sector**

Is it justified that the pest is listed at a taxonomic rank below species level? **Not relevant**

Conclusion:

- **Candidate: Vine sector**

2 – Status in the EU:

Is this pest already a quarantine pest for the whole EU? **No**

Presence in the EU:

Conclusion:

HOST PLANT N°1: **Vitis (1VITG)** for the Vine sector.

Origin of the listing: **Council Directive 68/193/EEC**

Plants for planting: **Plants intended for planting, other than seeds**

3 - Is the pest already listed in a PM4 standard on the concerned host plant? **Yes** Conclusion: **Qualified**

CONCLUSION ON THE STATUS: **Recommended for listing as an RNQP, based on EPPO PM 4 Standard.**

8 - Tolerance level:

Is there a need to change the Tolerance level: **Yes**

Proposed Tolerance levels: **Zero tolerance based on visual examination for the marketed plants, and on testing stock nurseries for Pre-basic, Basic and Certified material.**

9 - Risk management measures:

Is there a need to change the Risk management measure: **Yes**

Proposed Risk management measure: **Based on visual examination carried out at least twice during the last growing season at appropriate times for the expression of symptoms.**

- **Non-certified ('standard'):** Not more than 10% of plants showing any virus symptoms and all plants showing symptoms rogued out and destroyed within two weeks.

- **Pre-basic ("initial"), Basic, Certified:** additional measures (in addition to non-certified) could include protected cultivation of higher grade material, isolation distance from other vines and other host plants, periodic testing of mother plants, measures to control vectors, and a rest period from host plants of the virus before planting.'

Justification (if necessary): **For this pest there is no need for soil testing, but the vector should be controlled.**
