

Creating New Filters

Summary

If you want to filter the information provided in a given page based on specific criteria, you can create your own My Filter. By selecting a given filter from the My Filters dropdown on a page, the page will display information according to the criteria set up for that Filter. For example, if you want the Records List Page to display permits that were submitted in a certain timeframe, you can use filters to display only those records in that time period.

The pages that have the My Filters dropdown will also have a My Filters option in the Menu dropdown. This is where you can create and edit your own custom Filters. *Filters are specific to the page and specific to the user who created it.* If you create a custom filter, a coworker would not have access to your custom filter in their My Filter dropdown.

Steps to create a custom filter in the Record List Page

1. Click on the **four-square** Launchpad icon > open the **Record** list page > Click **Menu** > Select **My Filters**.

The screenshot shows the 'Record' list page interface. A red box highlights the 'Menu' dropdown in the top navigation bar, which is open, showing options like 'Customize Content', 'CSV Export', 'Expand List', 'My Filters', 'Charts', 'Edit View', and 'Print Page'. Another red box highlights the 'My Filters' option. Below the menu, a table of records is visible with columns for Record Type, Description, Number, Dir, Street Name, Street Type, Post Dir, Unit #, City, Parcel #, Status, Related Records, and Opened. The table contains four rows of data, including 'Master Bathroom Remodel', 'low voltage burglar alarm', 'Wire 200 amp feeder and tasting room', and 'Wire tasting room'.

2. You will see all of the global filters for your agency and your custom filters . Click **New** to create a new custom filter. *Note, while you can see Global Filters, you cannot edit them.*

The screenshot shows the 'My Filters' page. At the top, there is a 'Menu' dropdown and a 'New' button, which is highlighted with a red box and a mouse cursor. Other buttons include 'Delete', 'Cancel', and 'Help'. Below the buttons, it says 'Showing 1-5 of 18'. A table of filters is displayed with columns for Name, Primary, and Description. The first row shows 'Permits - Issued' with a 'No' primary status and 'Permits - Issued' description.

Creating New Filters

3. Enter a **Name** and **Description** for the custom filter. Next, under the **Search By** area, click the field dropdown and select which field you first want to filter on - then select the proper operator, and enter the specific value (case sensitive). You will be able to choose from available fields for that particular page, to pull in the information you might be looking for. For example, if you want to create a Filter for records with an **Addl Info Needed** status, you might select **Status** as one of your fields. You will also use a dropdown menu to choose from operators like = (equals), and != (not equal to). The field after the operator dropdown gives you the option of choosing from a generic menu or entering a specific value.

The screenshot shows the 'Search By' section of a form. A dropdown menu is open, displaying a list of fields: '-Select-', 'Activity Assigned to Department', 'Activity Assigned to Staff', 'Activity Description', 'Activity Due Date', 'Activity Name', 'Activity Start Date', 'Activity Type', 'Actual Prod. Units', 'Address Description', 'Address Line 1', 'Address Line 2', and 'Address Template'. The dropdown is highlighted in yellow. To the right of the dropdown is an operator dropdown menu showing '='.

definition list at
the end of this
document

The screenshot shows the 'Search By' section of a form. The field dropdown is set to '-Select-'. The operator dropdown menu is open, displaying a list of operators: '=', '<', '>', '<=', '>=', 'CONTAINS', 'IS NOT NULL', 'IS NULL', and 'LIKE'. The dropdown is highlighted in yellow. To the right of the operator dropdown is a text input field labeled 'SPECIFIC VALUE'.

Values are case sensitive and your Filters will not work if there are any differences between your search and the actual data. In our example, if you select **Status** is = (equal to) and then you enter a value of “**addl info needed**”, if the actual status as it appears in Accela is “**Addl Info Needed**”, your Filter will not pull data because of the difference in case.

Creating New Filters

- Click the New Field button to add another filter criteria. Once you have set the criteria, click the **Submit** button to save your custom filter.

Global Filters

Global filters can only be directly created or added by ePermitting staff. The filters that the ePermitting team create for the Model are set as Global Filters, therefore available to all agencies in the My Filters dropdown.

If you are looking to have a custom agency filter you have created added to your agency as a Global filter, please submit a helpdesk ticket to epermitshelp.BCD@oregon.gov to make this request. Please make sure to include a screenshot of your filter criteria with Name and Description, indicate which modules you want to access it, and which page you want it associated to - Record List, My Tasks Activities, My Tasks Workflow Tasks, or Inspections.

Creating New Filters

6. Now, you can select the new custom filter from the **My Filters** dropdown and filter the Record List page based on this new filter.

Operator	Description
!=	Not equal to
<	Less than
<=	Less than or equal to
=	Equal to
>	Greater than
>=	Greater than or equal to
IS NOT NULL	Used to query fields that contain any value, regardless of what that value is. When you use this operator, do not use a variable in the third field.
IS NULL	Used to query fields that do not have a value. For example, you might set up a data filter to query for records associated with a certain department, but not to any individual within the department. When you use this operator, do not use a variable in the third field.
Like	The alphabetic character field values that you want to include in the filter or query contain a string (alphabetic characters). For example, if you want to set up a query to list all contacts with the string "Jeff" in their email addresses, choose "Like" as the relational operator and enter "Jeff" as the value.
