

m:groupChr ECMA-376 §22.1.2.41 — All Variations

Each labeled line below is followed by the math object it describes. Empty m:chr should render with no bracket/arrow.

1. Default (no groupChrPr) — expect U+23DF bottom curly, below base

2. Empty m:chr (no m:val) — spec says character is hidden

3. Explicit bottom curly bracket U+23DF, pos=bot (underbrace)

4. Top curly bracket U+23DE, pos=top (overbrace)

5. Leftward arrow U+2190, pos=top

6. Rightward arrow U+2192, pos=bot

7. vertJc combo: pos=top, vertJc=top

8. vertJc combo: pos=top, vertJc=bot

9. vertJc combo: pos=bot, vertJc=top

10. vertJc combo: pos=bot, vertJc=bot

11. vertJc with empty m:val (defaults to bot per spec)

12. Complex base — summation inside groupChr

m:func Test Cases

Test 1: $\sin x$

Test 2: $\cos \theta$

Test 3: $\tan x$ (no funcPr)

Test 4: $\log 10$

Test 5: $\ln x$

Test 6: $f x$ (single-char)

Test 7: $\sin(x+1)$ multi-part

Test 8: Nested $\sin(\cos x)$

Test 9: $\sin x / x$ (in fraction)

Test 10: $\sin x + \cos x$

Test 11: sin with subscript arg

Test 12: No m:sty on fName
