

SuperDoc — m:limLow / m:limUpp test showcase (PR #2771)

1. limLow in m:func — lim over n to infinity: $\lim_{n \rightarrow \infty}$

2. Bare m:limUpp — equals with def above: $\lim_{n \rightarrow \infty}$ limLow with fraction in m:lim (nested math): $\lim_{n \rightarrow \infty}$

4. Bare m:limLow — non-function base: $\lim$

5. limUpp in m:func — lim with x above: $\lim_x$

m:groupChr ECMA-376 §22.1.2.41 — All Variations

Each labeled line below is followed by the math object it describes. Empty m:chr should render with no bracket/arrow.

1. Default (no groupChrPr) — expect U+23DF bottom curly, below base

2. Empty m:chr (no m:val) — spec says character is hidden

3. Explicit bottom curly bracket U+23DF, pos=bot (underbrace)

4. Top curly bracket U+23DE, pos=top (overbrace)

5. Leftward arrow U+2190, pos=top

6. Multi-char non-function Rightward arrow U+2192, pos=bot

7. vertJc combo: pos=top, vertJc=top

~~8. vertJc combo: pos=top, vertJc=bot~~

~~9. vertJc combo: pos=bot, vertJc=top~~

~~10. vertJc combo: pos=bot, vertJc=bot~~

~~11. vertJc with empty m:val (defaults to bot per spec)~~

~~12. Complex base (max): $\sum_{i=1}^n$ — summation inside groupChr~~

~~7. Multi-char non-function base (sup): $\sum_{i=1}^n$~~

~~8. limLow with subscript in limit (deep recursion): $\sum_{i=1}^n$~~
