Executive summary:

1. Women entrepreneurs in Indonesia face significant challenges in growing and extending their businesses to become large corporations.

2. The COVID-19 pandemic has had a significant impact on women entrepreneurs, with many struggling to maintain their businesses.

3. An integrative model of sustainable livelihood for women entrepreneurs ~~This document is a summary report on the core activities performances in the period May-Oct 2015.~~

~~The reports are based on the~~ VUCA can be applied as a survival strategy in dealing with various uncertainties.

Article rating:

May be slightly imbalanced: The article presents the information in a generally reliable way, but there are minor points of consideration that could be explored further or claims that are not fully backed by appropriate evidence. Some perspectives may also be omitted, and you are encouraged to use the research topics section to explore the topic further.

Article analysis:

The article "Livelihood strategies of women entrepreneurs in Indonesia" presents a study that aims to identify ~~service providers reports submitted in November 2015~~¹, the relationship between five variables of pentagon assets in Sustainable LivelihoodsA/R and investigate the survival strategy of women entrepreneurs during COVID-19 in Indonesia. The study uses a mixed-method approach, combining Partial Least Square (PLS) and Group Discussion Forum (FGD), to examine the relationship element of women entrepreneurs to build a business strategy and support the Livelihoods strategies Model.

The article provides valuable insights into the challenges faced by women entrepreneurs in Indonesia, who account for 60% of small and medium businesses. However, there are some potential biases and limitations in the study that need to be considered. Firstly, the sample size is relatively small, with only 155 women entrepreneurs participating in PLS and 14 participants in FGD. This may limit the generalizability of the findings to other contexts.

¹ <https://documents.eui.eu/document/2596>

Secondly, while the article highlights the importance of sustainable livelihoods for women entrepreneurs, it does not explore how gender inequality affects their access to resources such as finance, education, and networks. Women entrepreneurs face significant barriers due to cultural norms that limit their mobility and participation in public life. These factors can affect their ability to access capital or training programs that could help them grow their businesses.

Thirdly, while VUCA is an important concept for understanding how businesses can adapt to changing environments, it is not clear how this framework applies specifically to women entrepreneurs. The article suggests that an integrative model ~~performance report~~ automatically generated monthly, based on livelihood strategies and VUCA can be applied as a survival strategy for women entrepreneurs dealing with various uncertainties. However, it does not provide concrete examples or evidence of how this model ~~the monitoring of the IT services (where applicable). Analysis~~ has been implemented successfully ~~done versus the targets agreed in the EGI.eu OLA~~²

Finally, there is a lack of discussion around potential risks associated with promoting entrepreneurship as a solution for economic growth and development. While entrepreneurship can create jobs and generate income, it also comes with risks such as financial instability or failure. Women entrepreneurs may be particularly vulnerable to these risks due to their limited access to resources and support networks.

In conclusion, the article provides valuable insights into the challenges faced by women entrepreneurs in Indonesia and highlights the importance of sustainable livelihoods for their long-term viability. However, there are potential biases and limitations in the study that need to be considered, including small sample size, gender inequality, unclear application of VUCA framework, and lack of discussion around potential risks associated with entrepreneurship.

- Gender inequality and entrepreneurship in Indonesia

Access to finance ~~Report on the core services performance~~

² <https://documents.egi.eu/document/2456>

2.1 ~~1st Level Support And 2nd Level Support~~

Providers: CESNET, CSIC, LIP

The service has been provided continuously with no major deviations from the targets. There were small deviations from the targets but not big enough to considerably decrease the quality of the service.

In two months the average response time for urgent tickets was 1.5 days, rather than 1 day.

Achieved target: Overall yes.

2.2 ~~Acceptance criteria~~

Providers: CSIC

The service has been provided continuously with no deviations from the target. The service fulfilled the requirements of the EGI UMD provisioning, properly supporting the process.

Achieved target: yes.

2.3 ~~Accounting and metrics portal~~

Providers: FCTSG

The service has been underperforming during the first two months of the reporting period.

The first two months had an average availability of 95% vs the target of 99%.

In particular the second month of reporting had a very bad response time for service request (average of 16 days and 11 days, respectively for non urgent and urgent requests).

The last 4 months of the period performance were back on target.

- ~~Achieved target: No,~~ for women entrepreneurs in Indonesia
- ~~Cultural barrier~~two months. Yes for women entrepreneurs in Indonesia~~4 months.~~

2.4 ~~Risks associated~~Catch-all services

Provider: GRNET

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

Report created by FullPicture.app

2.5 Collaboration tools

Provider: CESNET

The service has been provided continuously with entrepreneurship no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.6 Incident management helpdesk

Provider: KIT

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.7 Message brokers network

Privers: GRNET, SRCE

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.8 Monitoring central services

Providers: GRNET, SRCE

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.9 Operations portal

Provider: CNRS

The service has been provided continuously with no deviations from the target. Availability have been always on target.

One ticket has been recorded with a longer response time than the target, but this has been due to a procedure error, while the user has been supported timely.

Achieved target: Yes.

2.10 Operations Support

Provider: Cyfronet

This is a human service, therefore only the response time to tickets is measured. The average response time reached the goal.

Achieved target: Yes.

2.11 SAM Central service

Providers: GRNET, SRCE, CNRS

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.12 Security coordination

Providers: FOM, CERN, STFC

This is a human service, therefore only the response time to tickets is measured. The response time reached the goal.

Security coordination efficiently supported EGI production infrastructure during the reporting period. Issues were reported in terms of lack of effort, but by prioritizing the issues, the most critical tasks have always properly followed up.

Achieved target: Yes.

[Report created by FullPicture.app](#)

2.13 Security monitoring

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.14 Software provisioning infrastructure performance report

Providers: GRNET, CESNET

The service has been provided continuously with no deviations from the target in terms of service availability.

In terms of responsiveness to incidents/service requests there have been relatively limited deviations.

- The product team justified this with the fact that some of these delayed tickets where not incidents or service requests, but rather requests for women in developing countries new features that could not be answered in the same timeline expected.
- Successful implementation of livelihood strategies for women entrepreneurs
- Sustainable livelihoods and economic development in Indonesia

Report location:

<https://www.fullpicture.app/item/cde11d2be88669882dad8b26c3870446> Only two tickets referring to the software provisioning infrastructure itself, and about regular incidents or basic service requests, were followed up with a delay:

114136

113522

Achieved target: Yes, with small deviations.

2.15 Staged rollout coordination

Providers: LIP, CSIC

Report created by FullPicture.app

The service has been provided continuously with no deviations from the target.

Achieved goal: Yes.

2.16 Security monitoring

Provider: CESNET

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.

2.17 Accounting repository

Provider: STFC

The service has been provided continuously with no deviations from the target.

Both availability and reliability have been on target, as well as responsiveness.

Achieved target: Yes.
