

SuperDoc — m:limLow / m:limUpp test showcase (PR #2771)

1. limLow in m:func — lim over n to infinity: $\lim_{n \rightarrow \infty}$

2. Bare m:limUpp — equals with def above: $\stackrel{def}{=} \limLow$ with fraction in m:lim (nested math): $\lim_{\frac{x}{y}}$

4. Bare m:limLow — non-function base: $\frac{a}{b}$

5. limUpp in m:func — lim with x above: $\lim^x$

~~m:groupChr ECMA-376 §22.1.2.41 — All Variations~~

Each labeled line below is followed by the math object it describes. Empty m:chr should render with no bracket/arrow.

1. ~~Default (no groupChrPr) — expect U+23DF bottom curly, below base~~

$$\underbrace{x + y + z}$$

2. ~~Empty m:chr (no m:val) — spec says character is hidden~~

$$a + b$$

3. ~~Explicit bottom curly bracket U+23DF, pos=bot (underbrace)~~

$$\underbrace{a + b + c}$$

4. ~~Top curly bracket U+23DE, pos=top (overbrace)~~

$$\overbrace{x + y}$$

5. ~~Leftward arrow U+2190, pos=top~~

$$\overleftarrow{n \text{ terms}}$$

6. ~~Multi-char non-function Rightward arrow U+2192, pos=bot~~

$$\underline{\overrightarrow{vector}}$$

7. ~~vertJc combo: pos=top, vertJc=top~~

$$\overbrace{p+q}$$

8. vertJc combo: pos=top, vertJc=bot

$$\overbrace{r+s}$$

9. vertJc combo: pos=bot, vertJc=top

$$\underbrace{t+u}$$

10. vertJc combo: pos=bot, vertJc=bot

$$\underbrace{v+w}$$

11. vertJc with empty m:val (defaults to bot per spec)

$$\tilde{x}$$

12. Complex base (max): $\max_{x \in S}$ — summation inside groupChr

7. Multi-char non-function base (sup): $\sup_{n \geq 1}$

8. limLow with subscript in limit (deep recursion): $\lim_{x_i \rightarrow 0}$

$$\underbrace{x_1 + x_2 + \dots + x_n}$$
