m:groupChr EGMA-376 §22.1.2.41 — All Variations

Each labeled line below is followed by the math object it describes. Empty m:chr should render with no bracket/arrow.

1. Default (no groupChrPr) — expect U+23DF bottom curly, below base

$$\underbrace{x+y+z}$$

2. Empty m:chr (no m:val) — spec says character is hidden

$$a+b$$

3. Explicit bottom curly bracket U+23DF, pos=bot (underbrace)

$$\underbrace{a+b+c}$$

4. Top curly bracket U+23DE, pos=top (overbrace)

$$\overbrace{x+y}$$

5. Leftward arrow U+2190, pos=top

$$\overleftarrow{n\text{ terms}}$$

6. Rightward arrow U+2192, pos=bot

$$\underrightarrow{vector}$$

7. vertJc combo: pos=top, vertJc=top

$$\overbrace{p+q}$$

8. vertJc combo: pos=top, vertJc=bot

$$\overbrace{r+s}$$

9. vertJc combo: pos=bot, vertJc=top

$$\underbrace{t+u}$$

10. vertJc combo: pos=bot, vertJc=bot

$$\underbrace{v+w}$$

11. vertJc with empty m:val (defaults to bot per spec)

$$\tilde{x}$$

12. Complex base — summation inside groupChr

$$\underbrace{x_1 + x_2 + \cdots + x_n}$$
