

m:d Delimiter - ECMA-376 Compliance Tests

Basic Structure

Case 1: Default parentheses, single expression

No dPr. Expected: (x+y)

$(x + y)$

Case 2: Multiple expressions, default separator

Two m:e, no dPr. Default sep is U+2502

$(x|y)$

Case 3: Three expressions, default separator

Three m:e, no dPr. Default sep is U+2502

$(a|b|c)$

Beginning Character (begChr)

Case 4: Custom begChr = [

Expected: [x+y)

$[x + y)$

Case 5: begChr present, no val (suppress opening) [BUG]

Element present without m:val. Expected: x+y) with no opening delimiter

$x + y)$

Case 6: begChr explicit empty val

m:val="". Expected: x+y) same as Case 5

$x + y)$

Ending Character (endChr)

Case 7: Custom endChr =]

Expected: (x+y]

$(x + y]$

Case 8: endChr present, no val (suppress closing) [BUG]

Expected: (x+y with no closing delimiter

$(x + y$

Combined Suppression

Case 9: Both present, no val (suppress both) [BUG]

Expected: x+y with no delimiters at all

$x + y$

Case 10: Both explicit empty val

m:val="" on both. Expected: x+y same as Case 9

$x + y$

Separator Character (sepChr)

Case 11: Custom separator (semicolon)

Expected: (a;b)

$(a; b)$

Case 12: sepChr present, no val (suppress separator) [BUG]

Expected: (xy) with no separator between expressions

(xy)

Common Patterns

Case 13: Absolute value

Expected: |x|

$|x|$

Case 14: Half-open interval [a,b)

Mixed delimiters with comma separator

$[a, b)$

Case 15: Floor function

Unicode delimiters U+230A, U+230B

$\lfloor x \rfloor$

Case 16: Ceiling function

Unicode delimiters U+2308, U+2309

$\lceil x \rceil$

Case 17: Nested delimiters

Delimiter inside delimiter. Expected: ((x+y)+z)

$((x + y) + z)$

Grow Property

Case 18: grow=1 (default) with fraction

Delimiters should grow to match fraction height

$$\left(\frac{a+b}{c+d}\right)$$

Case 19: grow=0 with fraction

Delimiters should NOT grow, stay at text height

$$\left(\frac{a+b}{c+d}\right)$$

Shape Property

Case 20: shp=centered (default) with stacked fraction

Delimiters centered around math axis

$$\left(\frac{a}{\frac{b}{c}}\right)$$

Case 21: shp=match with stacked fraction

Delimiters match exact shape of contents

$\left(\frac{a}{\frac{b}{c}}\right)$ ~~In addition to the key business terms defined above, an index of the other defined terms used in the text of this Lease is set forth below, with a cross-reference to the page of this Lease in which the definition of such term can be found:~~
