

Ekspertarvamus Luunja valla haldusterritoriaalse korralduse võimaliku muutmise kohta

Luunja vald ei täida haldusreformi seadusega pandud miinimumsuurusekriteeriumi 5000 elanikku, seisuga 01.01.2017 oli Luunja vallas registreeritud 4251 elanikku.

Luunja vald kuulub Statistikaameti analüüsi¹ põhjal Tartu linna lähivööndisse (joonis 1).

Joonis 1. Tartu toimepiirkond. Allikas: Statistikaamet (2014) Toimepiirkondade määramine

Luunja vald kuulub Tartu linnapiirkonna koosseisu ja on paljudes eluvaldkondade toimimises seotud Tartu linnaga. Vallas on 20 küla ja üks alevik. Rahvaarvult suurim on Lohkva küla. Kohalikeks tömbekeskusteks küladele on Lohkva, Luunja ja Kavastu, mis on endisaegsete ühismajandite keskused. Intensiivne ehitustegevus on valda toonud hulgaliselt uusi elanikke, rahvastikuregistri andmetel on elanike arv aastatel 2007-2015 kasvanud enam kui 1000 inimese võrra. Luunja valla arengut mõjutab oluliselt Tartu valglinnastumise protsess. Märkimisväärne osa rahvastikust elab Lohkva (1181 elanikku) ja Veibri (577) külades, mis asuvad Tartu linna administratiivpiiril. Linnast kaugemale jäävates külades asustustihedus oluliselt langeb ja tegu on pigem maalise elulaadi viljelemisega.

Luunja valla ühendamisel Vabariigi Valitsuse algatusel tuleb kaaluda ettepaneku esitamisel kahe võimaluse vahel – ühendamine Tartu vallaga või Tartu linnaga. Asjakohane ei ole Luunja valla ühendamine Haaslava, Mäksa ja Võnnu valdade baasil moodustuva uue omavalitsusüksusega, mis on märksa maalisema iseloomuga kui Luunja vald ning puudub kogemus ja ressursid Tartu valglinnastumise käigus Tartu linnapiiril kujunenud tiheasustuse piirkondade arendamiseks.

Tartu linnaga ühendamise poolt on järgmised asjaolud:

¹ Statistikaamet (2014) Toimepiirkondade määramine.

- Tartu linnaga ühendatakse linnaga kokku kasvanud Lohkva ja Veibri külade tiheasustusalad Luunja vallast viies need ühtse juhtimise alla ja moodustub loogiline planeerimispiirkond. Samas maaliste Luunja valla alade arendamine eeldab keskuslinna käsitlusest erineva linnastu kontseptsiooni rakendamist.
- Luunja valla Lohkva ja Veibri küldes elab ligi pool Luunja valla elanikkonnast, kes saavad ühinemisel Tartu linnaga võimaluse rääkida kaasa arengutes, mis mõjutavad nende tegelikku igapäevast teenuste tarbimist. Olukord, kus elanikud ei saa oma elukeskkonda maksumaksjana mõjutada ja selle arengus kaasa rääkida, ei ole demokraatlik.
- Ühise omavalitsusena on liikumiskeskond paremini korraldatav, et tagada ennekõike keskuslinnas Tartus töökohtade, teenuste ja vaba aja võimaluste kättesaadavus praeguse Luunja valla elanikele.
- Tekivad paremad võimalused läbi planeerimise arendada Tartu linna. Lohkva ja Veibri küla ühinemisel moodustuks loogiline Tartu linna tervikala.

Tartu vallaga ühendamise poolt on järgmised asjaolud:

- Ühinemisel Tartu vallaga saab Vabariigi Valitsuse algatatud ühendamise käigus pakkuda terviklahendused Tartu valla kujundamiseks (arvestades ka teisi ühinevad omavalitsusi) luues parima elukeskkonna ja lahendused elanikele ühises toimealas.
- Tartu vald ja Luunja vald on arengus sama sotsiaal-majandusliku iseloomuga omavalitsused, neil on analoogsed arenguprobleemid ja väljakutsete lahendamine. Neil on vahetud Tartu valglinnastumise mõjuga piirkonnad, sh sisuliselt Tartu linnaga kokku kasvanud alad ning samas on valdadel ka linnalähedase maapiirkonnana Tartu linna vahetust mõjust väljapoole jäävad lähivööndi alad (kuigi ka nendes piirkondades on Tartu linnal suur mõju võimekusega pakkuda töökohti, avalikke teenuseid ja võimalusi vaba aja veetmiseks).
- Luunja ja Tartu vald on teinud väga olulisi pingutusi, et tugevdada omavalitsuste terviklikkust ja sisemist sidusust. Seega on olulisel kohal olnud mõlemas omavalitsuses nii linnalise kui maalise elulaadi toetamine. Sarnasuse tõttu on juhtimiskultuuride ühendamine lihtsam.
- Luunja vallavolikogu on teinud vabatahtliku ühinemise etapis ettepaneku ühinemiseks Tartu vallaga (kes küll keeldus esitatud ettepanekust).

Section One

Introduction to the Model User Guide Requirements for transmitting insurance policy data

The IICMVA supports the use of the IICMVA Online Insurance Verification Model using web services technology and does not consider a data transfer process (often referred to as a Book of Business data transfer) to be part of the Online Insurance Verification Model.

However, the IICMVA also recognizes that a jurisdiction may want a one-time data file transfer to establish a current insurance company of record to associate with their registered vehicles. This process is intended for the express purpose of facilitating a jurisdiction's ability to send an online insurance verification query.

If a jurisdiction determines there is a need for insurance companies to provide additional insurance information, the IICMVA has established this guide which defines a standardized methodology and data file format for the consistent submission, implementation and use of the provided supplemental data.

Insurance Industry Committee on Motor Vehicle Administration

Section Two

Data File Transfer Guidelines

Data Transfer Process

This section provides guidance for supporting the online insurance verification model. If a state implements the following process, IICMVA recommends a one-time data transfer.

This process eliminates the need for the industry to resolve unmatched vehicle records.

Prior to electing to implement this process, full consideration of the following inherent limitations of “point in time” data files should be evaluated:

Data elements often do not match

Collection of data, such as policy numbers, VINs, and customer information by separate entities may result in mismatched data. Consequently, data transfer files may not match all registered vehicles.

Participation by commercial insurers may not be possible

The need to collect and process vehicle data elements varies among commercial insurers. Since some commercial insurers do not maintain specific vehicle data, they would not be able to provide this information and a secondary method may need to be implemented.

Data may be restricted to jurisdictional boundaries

Auto liability policies are commonly written in the state the vehicle is garaged. The state where the policy is written could differ from the state in which the vehicle is registered. Consequently, insurance companies may not be able to identify the correct state of registration for each insured vehicle. This may result in submission of data files that do not contain all vehicles that are registered in the policy state and conversely, may contain vehicles that are not registered in the policy state.

Data provided is only valid at the time the file is created

Policy changes and transfers between companies occur frequently and will result in some portion of the data provided to become obsolete after a data file is created. As a result, the current insurer of record of some registered vehicles may be misidentified.

The following process flow diagram has been provided to illustrate the electronic data transfer process:

1 - Submission of Data Files

Each insurer will send a data file via agreed upon electronic method of transmission. File Transfer Protocol (FTP) with Pretty Good Privacy (PGP) compatible encryption is the recommended method for submitting data to the state's designated Internet Protocol (IP) address.

~~2 - State's System - Receipt of Insurance Data Files~~

~~The state's application will verify that each company has sent an insurance data file. If a file has not been received from a specific insurance company, the company's designated contacts should be notified immediately via e-mail or other agreed upon electronic notification method.~~

~~3 - State's System - File Format Validation~~

~~Upon receiving data files, the state or its designated vendor will validate the file format to ensure that it adheres to the standard as outlined in this document.~~

~~Files that fail to meet the set standard will be rejected by the state's system. The rejection can be conveyed in the form of an e-mail or automated electronic notification to the respective company's designated contact. An option for insurance companies to receive a notification of the file's acceptance will also be available. The impacted insurance company will then have an opportunity to correct and resubmit the data files.~~

~~4 - State's System - File Process~~

~~The state's system will incorporate a process to identify the current insurer of record.~~

~~Note: The return of individual records to the submitting insurance company for further processing is not within the scope of this process.~~

5—State Jurisdiction—Insurance Verification Process

The state, upon receiving notification of vehicles from the file processing system, has the option to request proof of insurance coverage directly from the registrants of those vehicles. If the state so chooses, the information provided by the vehicle registrants can be used to verify coverage directly with the insurance company by using the IICMVA Online Insurance Verification Model web service.

Data File Format

The data in each record shall always be recorded in fixed length fields using the 7-bit American Standard Code for Information Interchange (ASCII).

The field name “Mandatory/Optional” is used to identify data which is required (Mandatory) or optionally (Optional) provided by the entity transmitting the file. “Optional” data fields will be transmitted at the discretion of the insurance company based upon the submitting company’s independent business rules.

Transmission methods and security processes allow for the identification of sender and receiver of data which eliminates the need for a header record. The trailer record was included to allow the receiver to validate all data sent was received.

Each record shall consist of a record size of 300 bytes and adhere to the following structures:

Detail Record

Field Name	Length	Begin	End	Type	Mandatory /Optional	Description
POLICY TYPE	2	1	2	AN	M	‘VS’ = Vehicle Specific ‘NS’ = Non Vehicle Specific
NAIC	5	3	7	N	M	NAIC Code
POLICY NUMBER	30	8	37	AN	M	Policy Number
EFFECTIVE DATE	8	38	45	N	M	Effective Date—YYYYMMDD format
VIN	25	46	70	AN	Ø	VIN (optional for non-vehicle specific policy)
LAST NAME or ORGANIZATION	40	71	110	AN	Ø	
PREFIX NAME ABBR	3	111	113	AN	Ø	
MIDDLE NAME	20	114	133	AN	Ø	
FIRST NAME	40	134	173	AN	Ø	
SUFFIX NAME	3	174	176	AN	Ø	Abbreviated Name Suffix (JR, SR, etc)
FEIN	9	177	185	AN	Ø	
ADDRESS	50	186	235	AN	Ø	

CITY	35	236	270	AN	Θ	
STATE	2	271	272	AN	Θ	
ZIP	5	273	277	N	Θ	
COMMERCIAL POLICY INDICATOR	1	278	278	AN	Θ	Y for Commercial Policy
FILLER	23	278	300	AN	M	Space Filled

Trailer Record

Field Name	Length	Begin	End	Type	Mandatory /Optional	Description
TYPE	2	1	2	AN	M	'TR' = Trailer
RECORD COUNT	12	3	14	N	M	Record count not including Trailer Record
PROCESS DATE	8	15	22	N	M	Date the file was created — YYYYMMDD Format
FILLER	278	23	300	AN	M	Space Filled
