French I Course Syllabus 2018-2019

Instructor: Janet Wheeler

E-mail: wheelerjl@mukilteo.wednet.edu

Ms. Wheeler's website: <http://ma.mukilteo.wednet.edu/pages/MarinerHS/Classes/01-wheelerjl-home>

Course Overview and Objectives

French One helps students to develop listening, reading, speaking, and writing skills to communicate in elementary French. Oral communication is emphasized and practiced. Students will acquire knowledge of, develop a respect for, and demonstrate an appreciation for the different culture of the Francophone world resulting from exposure to its customs, geography, literature and arts. This cultural awareness, combined with the foreign language skills initiated in this course, will enable students to function more successfully in the diverse global community. This course correlates to the vision of developing life-long learners who have a sense of global citizenship, can communicate with people within their own community and throughout the world, and can use technology to enhance these goals.

Credit: 1.0 Elective/World Language

Students in French I will articulate potential answers to these questions:

1. How does someone interact, understand, and be understood by a Francophone person?
2. In what ways do French speakers express concepts such as: greetings; numbers, calendar & time; descriptions of family, friends & surroundings; likes/dislikes & daily activities; and wishes & abilities -- differently from English speakers, both orally and in written form?
3. How do history, geography, and contemporary life affect French culture and language?
4. What do French grammatical structures, language and culture teach us about our own?
5. How do French communities and their customs compare to one another and our own and what does this signify?
6. With or without technology, why is communication and understanding between diverse communities important?
7. What is the role of the individual in the global community?

Materials Used

Student Materials required:

Also recommended:

SPIRAL NOTEBOOK

3-ring binder (for handouts and HW)

Loose-leaf paper

3x5 notecards, scissors, colored pencils & pens

Pencil, pen, highlighters

French/English Pocket Dictionary

Texts

D'Accord 1 (Vista Higher Learning, 2014)

Supplementary: Dis-Moi (Scott, Foresman, 1990)

Transparencies, activities, videos, and audio tapes supplied by publisher and instructor.

Numerous activities and resources will also be accessed at vhlcentral.com

Grading Procedures/Evaluation

Students earn points daily, for both written and oral practice. Students are assessed on material regularly (through composition, exam, or project) and at the end of each unit (approximately 2 per quarter). Assignments are given the following categories, which in turn are weighted to calculate students' cumulative grades:

Participation/Attendance = 20% (Being in class, on time, listening, and responding, etc)
Daily Assignments = 30%
Assessments = 40%
Culture Points = 10%

Homework Expectations

Assignments given as homework are expected to be completed on time. To receive full credit, the assignment must be completed and turned in AT THE BEGINNING of the period on the due date. *Late assignments lose 10% credit per day.*

Culture Points are an ongoing assignment, which students are expected to complete outside of class and turn in *throughout* the semester. These points may be earned in a variety of ways, and parent involvement is encouraged. Unlike daily work, final dates for submitting Culture Points are non-negotiable.

Students may earn extra credit in several ways. Extra credit is frequently offered on tests & quizzes, and is often rewarded on projects and assignments where a student has performed well above expectations.

Testing Procedures

Students are expected to prepare thoroughly for tests and quizzes. However, if a student is not satisfied with the results of a test or quiz, he may retest, before or after school by appt. Before this retest, the student should arrange a study session with the teacher or a tutor. The score earned on this retest will replace the original grade, to a maximum of 85%.

On occasion, students will be given take-home tests. In this case, tests must be turned in at the beginning of the period. No late take-home tests are accepted.

Attendance and Make up Work

Participation, which is 20% of a student's cumulative grade, is directly affected by attendance.

Tardies: Being late to class hinders a student's ability to participate fully in class, and therefore a student loses participation points for every time s/he is tardy. In addition, a student will be assigned detention for every 3 tardies.

Absences: When a student is absent, s/he must make the effort to make up the work missed in a reasonable amount of time. Students should check the Website Homework Page following any absence:

- **Excused Absence:** If a student misses a test or quiz, s/he should take the test or turn in the assignment within 3 days of returning to class. If a student misses a due date for a long-term asst, s/he is expected to turn it in upon the day or return. Any student who requires more time as a result of excused absences should discuss needs with the instructor, and will then be given extra consideration for an extended due date.

- Unexcused Absence: Any student coming to class having excused an absence will not be allowed additional time for making up work. If an absence is left unresolved, any work or tests missed during the absence will earn 0 credits. No participation points may be made up.
- Field Trips/School Events/Appointments: Whenever possible, work is due before the event or immediately upon return. Otherwise, the student and instructor will agree upon the work to be completed during or after the absence. Participation points for the day will not be affected when prior notice is given.

Credit can be lost if absences exceed 12 per semester (per District Policy)

Grading Scale

To determine a student's cumulative semester grade, quarter percentages are averaged using the following scale:

A 100-94%	C+ 79-77%	F below 60% (no credit)
A- 93-90%	C 76-74%	
B+ 89-87%	C- 73-70%	INC (when a majority of projects/papers cannot be assessed
B 86-84%	D+ 69-67%	due to unusual circumstances. Can only be given with
B- 83-80%	D 66-60%	Administration approval)

Academic Dishonesty

Students are expected to complete their own work. If a student is having difficulty completing an assignment on time, s/he is encouraged to seek help from the instructor or from peers, but copying others' work is forbidden. If a student's work is copied from another student's, *both* students shall receive 0 for that assignment.

Students are also reminded that their work is assessed according to the language acquisition goals/objectives of the unit and level. In other words, students should not rely on translation resources to compose their written work. Students are generally discouraged from composing in English first, then trying to translate. *Using translation resources instead of composing one's own work in French is considered academic dishonesty.* First offense = warning with chance to make up. Second offense = 0 for the assignment + conference. Continued abuse of translation resources will result in administrative referral and disciplinary action.

Classroom Expectations

Students are expected to:

1. Come to class prepared to learn with spiral notebook, textbook, and assignments in hand.
2. Take an active part in classroom activities.
3. Be attentive during instruction and follow directives conscientiously.
4. Remove obstacles to communicative practice: refrain from eating, chewing gum, listening to headphones, using personal electronic devices, violating dress code policy, and using offensive language.
5. Respect others' property, feelings, opinions, and right to learn: refrain from interfering with or distracting from instruction and activity.

Failure to maintain these standards will result in one or all of the following: verbal warning, student/teacher conference, loss of Participation Points, and contact with Advisor and/or parents. Repeated offenses may result in parent conference, administrative intervention, and removal from class.

Additional Assistance

French I students are encouraged to use the expertise of upper-level students for additional help, either formally or informally. Peer tutoring may also be available school wide. In addition, students are encouraged (or specifically invited) to get extra help from Ms. Wheeler outside of class before or after school.

A variety of language acquisition programs are available on-line and in bookstores for further enrichment. See Ms. Wheeler's website for a list of on-line resources.

Stage 1 Geography

Assessment Type 2: Fieldwork Task 2

Contemporary Issues: Local Issues

Purpose

This fieldwork task is designed to be used during an extended fieldtrip to the area, or over several visits. The task is an investigation of the relationship between the natural environment and the ways in which it is used by Indigenous and non-Indigenous people. Students use fieldwork techniques to collect data in the wetland environment of the Coorong. The data is used to investigate and compare the ways that the Coorong is used by Ngarrinjari and non-Indigenous people, and evaluate the impact of these uses on the environment of the Coorong.

Assessment Description

Produce a written report or multimodal presentation in which you compare the environmental impacts of the ways Indigenous people and non-Indigenous people use the environment of the Coorong. Analyse and evaluate the data collected in the field to make 2 or 3 recommendations about how the land use in the area should be managed in the future.

In order to collect evidence and data to include in your report complete the following field work activities:

- carry out individual research into the Coorong wetland and the Ngarrindjeri Aboriginal people prior to the visit.
- identify, and accurately map the location of evidence of Ngarrindjeri and non-Indigenous land and water use in the Coorong. Use an appropriate base map, either paper or GIS, and include the location of evidence of land use such as middens, bush turkey mounds, stone fish traps, traditional ceremonial sites, four wheel drive tracks and camping grounds. Use Google Maps to take GPS coordinates for each site, if you have access to a mobile phone.
- draw and annotate sketches, and take photographs of evidence of land use, including middens, mallee fowl mounds, stone fish traps, boat ramps, roads and tracks, camping grounds.
- work in a small group to collect the following data along a vegetation transect:
 - use ranging poles to mark the start and end points of your transect, and measure the distance
 - select sampling points along the transect, and at each sampling point, measure and record:
 - percentage of vegetation cover and coverage of different plant species
 - evidence of human activity — photographs of trampling, litter count, measure width and depth of 4 wheel drive tracks
- work in a small group to complete water quality analysis at sample sites along the Coorong lakes:
 - measure salinity, phosphates, nitrates, pH, macroinvertebrates
- devise and conduct a questionnaire to elicit the views of local people and visitors about the impact of human activity on the Coorong (land and water).

Assessment Conditions

- Produce a written report or multimodal presentation of your findings. A written report should be no more than 1000 words and an equivalent length for a response in multimodal form.
- The report or presentation should include:
 - an appropriate title
 - a map showing the location of the sites of Indigenous and non-Indigenous land and water use
 - annotated sketches and photographs of land and water use, and the impacts of this use
 - description and evaluation of the techniques used to collect data
 - an annotated diagram of the vegetation transect
 - visual representations, including graphs, of the water quality analysis
 - analysis and evaluation of the environmental impact of people on the Coorong
 - a conclusion with recommendations.
- The specific features being assessed are:
 - **AE1: Analysis of the interactions between people and environments at a local level**
 - **AE2: Analysis and evaluation of information to determine possible outcomes and make recommendations**
 - **Ap1: Application of geographical and fieldwork skills to identify and examine geographical issues**
 - **Ap2: Communication of geographical information, using subject-specific terminology and visual representations**

	Knowledge and understanding	Analysis and Evaluation	Application
A	Comprehensive knowledge and understanding of geographical concepts. Comprehensive knowledge and understanding of the natural, built, economic, and/or social characteristics of places.	Insightful analysis of the interactions between, and interdependence of, people and environments at local, national, or global levels. Comprehensive analysis and evaluation of information to determine possible outcomes, make justifiable recommendations, and form conclusions.	Purposeful and well-considered application of a variety of geographical and fieldwork skills, including the use of spatial technologies, to identify and examine geographical issues. Clear and coherent communication of relevant geographical information, using appropriate subject-specific terminology and visual representations.
B	Well-considered knowledge and informed understanding of geographical concepts. Well-considered knowledge and informed understanding of the natural, built, economic, and/or social characteristics of places.	Well-informed analysis of the interactions between, and interdependence of, people and environments at local, national, or global levels. Detailed and well-considered analysis and evaluation of information to determine possible outcomes, make justifiable recommendations, and form conclusions.	Well-considered application of different geographical and fieldwork skills, including the use of spatial technologies, to identify and examine geographical issues. Clear communication of relevant geographical information, using appropriate subject-specific terminology and visual representations.
C	Considered knowledge and understanding of geographical concepts. Considered knowledge and informed understanding of the natural, built, economic, and/or social characteristics of places.	Informed analysis of the interactions between, and interdependence of, people and environments at local, national, or global levels. Considered analysis and some evaluation of information to determine possible outcomes, make recommendations, and form conclusions.	Competent application of geographical and fieldwork skills, including the use of spatial technologies, to identify and examine geographical issues. Competent communication of generally relevant geographical information, using mostly appropriate subject-specific terminology and visual

			representations
D	Recognition and basic understanding of some geographical concepts. Basic awareness and some understanding of aspects of the natural, built, economic, or social characteristics of places.	Basic consideration and description of the interactions between, and interdependence of, people and environments at local, national, or global levels. Superficial consideration of information to describe possible outcomes and recommendations.	Some application of different geographical and fieldwork skills, which may include the use of spatial technologies. Basic communication of some geographical information, using occasional subject-specific terminology and visual representations.
E	Identification of one or more geographical concepts. Emerging awareness of aspects of the natural, built, economic, or social characteristics of places.	Brief or attempted description of the interactions between, or interdependence of, people and environments at local, national, or global levels. Description of information linked to a possible outcome or recommendation.	Limited application of geographical and fieldwork skills. Attempted communication of geographical information, with limited use of subject-specific terminology or visual representations.
