

PARTICIPANT INFORMATION SHEET – PATIENTS AND CARERS

Study Title: Evaluating video and hybrid group consultations

We'd like to invite you to take part in our research study. Before you decide, it is important that you understand why the research is being done and what it would involve for you. Please take time to read this information and discuss it with others if you wish. If there is anything that is not clear, please ask us. You can also find further information about how researchers use information from patients at: www.hra.nhs.uk/patientdataandresearch

What is the purpose of the study?

Some GP practices in the UK invite patients to take part in clinical consultations as a group. These group sessions usually involve 6-8 patients with the same condition or similar health needs. Patients discuss test results, any medication changes and/or other health concerns with a clinician, and also provide support to each other in a group setting. In response to the Covid-19 pandemic, some of these group sessions are now delivered online on video, or involve some people joining online and others in-person in the same 'hybrid' session.

In this research we are working with GP practices where video and in-person group consultations are implemented to better understand what drives successful delivery of this new model of care. The study also examines if there are different experiences between patients attending group consultations and those attending individual appointments, in terms of how they feel about their health, how much they need to use health services and how satisfied they are with the service. We would like to invite you to participate in this survey as someone who participates in one-to-one consultations only at your practice, so we can learn more about the differences between care models.

Why have I been invited to take part?

You have been invited to take part in this research study because in the last 12-24 months you have attended a one-to-one menopause appointment at one of the participating GP practices in our study. All participants should be over 18 years old. We plan to recruit 500 patients and carers to this study in total. We are also involving 20-30 staff, and 10-17 commissioning and policy stakeholders.

Patient participant information sheet	Evaluating video and hybrid group consultations

Do I have to take part?

No, taking part in this study is voluntary and you can withdraw at any time without giving a reason if you later change your mind.

What will happen to me if I decide to take part?

If you are happy to participate in this study, you will be asked to provide consent. A copy of the record of consent will be given to you or sent by email for you to keep.

The research team will obtain anonymised data from your health records so that we can understand more about your health and usage of health services (over a period of 12 months following a one-to-one menopause appointment in the last 12-24 months).

What if I need help from a health or support worker?

You can ask your support worker, a family member or someone you trust to help you. You can let them know about this information sheet and confirm with them if you want to take part.

What should I consider?

The main thing to consider is whether you are comfortable with responding to survey questions on your experiences and views on primary care services. This could raise some potentially sensitive subjects around your health or care experiences.

Are there any possible disadvantages or risks from taking part?

There are minimal risks in this study other than time commitment.

What are the possible benefits of taking part?

Whilst we cannot guarantee any direct benefit to you, our aim is to use the research results to help improve the NHS. Learning from this study could potentially lead to improved organisation of remote group-based service delivery in general practice, better patient care and self-management.

Will I be reimbursed for taking part?

There will be no reimbursement.

Will my taking part in the study be kept confidential?

Yes. People who do not need to know who you are will not be able to see your name or contact details. Your data will have a code number instead. We will keep a separate paper record in a locked cabinet of your real name and corresponding code number.

If anything is said that raises a concern of harm to self or others, or suggests poor practice, we have safeguarding obligations to follow this up, which may mean discussing with others.

We will write our reports in a way that no-one can work out that you took part in the study.

Responsible members of the University of Oxford and the relevant GP practice may be given access to data for monitoring and/or audit of the study to ensure that the research being done properly.

What will happen to my data?

Data protection regulation requires that we state the legal basis for processing information about you. In the case of research, this is 'a task in the public interest.' The University of Oxford is the sponsor for this study, is the data controller and is responsible for looking after your information and using it properly.

We will be using information from you and your medical records to do this research and will use the minimum personally-identifiable information possible. People will use this information to do the research or to check your records to make sure that the research is being done properly. We will keep all information about you safe and secure on a non-networked computer at the Universities of Oxford, York and Exeter.

Research documents with personal information, such as consent forms, will be held securely at the University of Oxford for 15 years after the end of the study. We will keep some of the data so we can check the results.

Some of your information will be sent to our research partners at the University of Exeter.

Data will be handled in line with UK General Data Protection Regulation (GDPR) and the Data Protection Act (2018).

Data protection regulation provides you with control over your personal data and how it is used. When you agree to your information being used in research, however, some of those rights may be limited in order for the research to be reliable and

accurate. Further information about your rights with respect to your personal data is available at

<https://compliance.web.ox.ac.uk/individual-rights>

You can find out more about how your information is used by asking one of the research team

or by emailing the Chief Investigator (chrysanthi.papoutsi@phc.ox.ac.uk)

You can find general information about how patient information is used in research at www.hra.nhs.uk/information-about-patients/

What will happen to my data at the end of the study?

The members of our research team will analyse the data and write some papers and reports, including a summary for the general public. Our findings will be published and available through journal publications. You will not be identified from any report or publication placed in the public domain.

Can I change my mind about participating?

You can stop at any time, without giving a reason and without penalty, by telling the researchers of your decision (using the contact details at the end of this information sheet). Your participation is voluntary and even if you originally said yes, you may change your mind at a later stage (any time before the project end date in May 2025). The researchers will ask for your permission to keep data already collected but you are free to refuse this. Please note information from your consultations is also recorded by the GP surgery as part of standard clinical care and the study team has no control over how this information is processed.

A member of our study team may wish to record a reason about why you have withdrawn for our record keeping, but you do not have to provide one.

What if there is a problem?

The University of Oxford, as Sponsor, has appropriate insurance in place in the unlikely event that you suffer any harm as a direct consequence of your participation in this study.

If you wish to complain about any aspect of the way in which you have been approached or treated, or how your information is handled during the course of this study, you should contact the Chief Investigator Dr. Chrysanthi Papoutsi chrysanthi.papoutsi@phc.ox.ac.uk or you may contact the University of Oxford Research Governance Ethics and Assurance (RGEA) office on 01865 616480, or the director of RGEA, email ctrq@admin.ox.ac.uk.

The Patient Advisory Liaison Service (PALS) is a confidential NHS service that can provide you with support for any complaints or queries you may have regarding the care you receive as an NHS patient. PALS is unable to provide information about this research study.

You can contact the local NHS Patient Advice and Liaison Service (PALS), at 01865 221473 or here: < [https://www.nhs.uk/service-search/other-services/Patient-advice-and-liaison-services-\(PALS\)/LocationSearch/363](https://www.nhs.uk/service-search/other-services/Patient-advice-and-liaison-services-(PALS)/LocationSearch/363) >

How have patients and the public been involved in this study?

Patient and public contributors helped design the research study and data collection tools.

Who is organising and funding the study?

The project is led by Drs Chrysanthi Papoutsis and Sara Shaw at the Department of Primary Care Health Sciences and funded by the National Institute for Health Research through the Health Services and Delivery Research (HS&DR) Programme.

Who has reviewed the study?

All research in the NHS is looked at by an independent group of people, called a Research Ethics Committee, to protect participants' interests. This study has been reviewed and given favourable opinion by the London - Hampstead Research Ethics Committee.

Further information and contact details:

If you would like to discuss the research with someone beforehand (or if you have questions afterwards), please email the Chief Investigator:

Patient participant information sheet	Evaluating video and hybrid group consultations
IRAS ID 308516	Ethics Ref: 22/PR/0277
Chief Investigator: Chrysanthi Papoutsis	Version/Date: 1.6 / 19/12/2024

Author's Name (without title)¹, Author's Name (without title)²
(Font Calibri, 12, Each first letter capitalized)

^{1,2} Department, Faculty, University, Country (Font Calibri, 12)

¹Corresponding author's email (Font Calibri, 12)

Abstract

The abstract contains a brief description of the research problem and objectives, the methods used, and the research results. It should reflect the article's content and focus on research findings. The abstract should be written in a single paragraph with a maximum of 300 words. Keywords should be included to describe the research field and the underlying terms of the study. Keywords can be single words or word combinations (phrases). Typically, the number of keywords is between 3 – 5 words. Keywords are essential for indexing and searching purposes. (Font Calibri, 10)

Keywords: keyword 1, keyword 2, keyword 3 (Font Calibri, 10, Italics)

Introduction

The introduction should state the author's objectives and clearly define the research problem. It is recommended that authors structure the background of their article into four (4) sections: First, **Empirical or Theoretical Problem** Begin by stating the empirical or theoretical problem that forms the basis of your research. This can be written in one or two paragraphs.

Second, **Recent Studies** Provide an overview of recent studies related to the research focus. These studies help establish the current state of knowledge in your field and identify the limitations of previous research. This section can be written in two or three paragraphs.

Third, **Research Gap** Identify the gap between recent studies and the empirical or theoretical aspects of your research focus. The introduction should summarize relevant research to provide context and explain previous findings that your study challenges or expands upon. This can be written in one or two paragraphs.

Patient participant information sheet	Evaluating video and hybrid group consultations
IRAS ID 308516	Ethics Ref: 22/PR/0277
Chief Investigator: Chrysanthi Papoutsis	Version/Date: 1.6 / 19/12/2024

Fourth, **Research Questions and Objectives** State the research questions and objectives based on the gap analysis from the previous paragraphs. Additionally, mention the novelty of your research. This section can be written in one paragraph. (Font Garamond, 12).

Research Methodology

In general, this section explains how the research was conducted. The main topics covered in this section include: (1) Research design, (2) Sample population or research subjects, (3) Data collection techniques and instrument development, (4) Data analysis techniques

You can use the following questions as a guide when writing the methodology: 1) Is the design appropriate for answering the research questions? 2) Is there sufficient information for someone to replicate the study? 3) Does the article clearly identify the procedures followed? 4) Are the procedures presented in a meaningful order? 5) If the method is new, is it explained in detail? 6) Is the sampling method appropriate? 7) Are the equipment and materials adequately described? 8) Is it clear what type of data was recorded? 9) Have you properly explained the measurement process?

It is important to note that you do not need to use excessive formulas or tables unless they are necessary. (Font: Garamond, Size: 12)

Results and Discussion

Results

Results (Level 2 Subheading)

This section is the core of the article. Here, the author must clearly explain the findings of the study in a logical order. The research results presented in this section come from a clean data analysis process, such as statistical calculations, testing procedures, or other methods used to achieve the research objectives. Present the research findings concisely. (Font Garamond, 12)

If you need to present a table, use the following format:

Table 1. The table title should be centered above the table.

Column 1	Column 2	Column 3
1		

Data-1	Data-4	Data-7
Data-2	Data-5	Data-8
Data-3	Data-6	Data-9
Total	Sum Column 2	Sum Column 3

Figure 1. The  below the image.

Interpretation of the results should not be included in this section unless the study requires a combination of findings and discussion in one section.

The title of a table should be placed above the table, as seen in **Table 1**, whereas the title of an image, photograph, or chart should be placed below the image.

Subheading—Level 3

If your article presents direct quotes, excerpts from transcripts, or interviews, use the following format:

Use these questions as a guide when formulating synthesis/discussion: 1. Are the claims in this section supported by research findings, and do they seem reasonable? 2. Have you demonstrated how the research findings relate to expectations and previous studies? 3. Does the article support or contradict previous theories?

Discussion

This section is also a main part of the research article and is usually the longest. If subheadings are needed, follow the formatting used in the results section. The discussion should be presented in a narrative form with the following structure:

Interpretation of Findings: Explain the meaning of your results, their relevance to the hypothesis or research question, and their broader significance.

Comparison with Other Studies: Compare your findings with relevant research results. This may include studies that obtained similar or different results. The goal is to demonstrate how your research contributes to the relevant scientific field.

Implications: Discuss the practical or theoretical implications of your findings. This includes how the results may influence existing theories, practices in related fields, or future research directions.

Research Limitations: Honestly discuss the limitations of your study. These may include methodological constraints, sample limitations, or interpretational challenges.

~~Acknowledging limitations not only enhances the credibility of your research but also opens opportunities for further studies.~~

~~**Suggestions for Future Research:** Provide recommendations for future research based on your findings and limitations. These may include suggestions on methodology, topics, or variables that should be further explored.~~

~~(Font: Garamond, Size: 12, Bold)~~

Conclusion

~~Summarize your research findings critically and logically. Be cautious when generalizing results and acknowledge any research limitations. The conclusion should explain how your study contributes to scientific knowledge. (Font Garamond, 12, Bold)~~

Acknowledgments (if applicable)

~~Mention individuals or institutions that contributed to or supported your research. Acknowledge financial support, facilities, or valuable input that helped improve your article. If the article was presented at a seminar or conference, mention the event here. (Font Garamond, 12, Bold)~~

References

~~Cite a minimum of 15 references, with at least 80% of them published in the last 10 years. Preferably use primary sources and provide valid DOIs when available.~~

~~References and in-text citations should follow **APA 7** format. Use reference management software (e.g., **Zotero, Mendeley**), or ensure that each citation and reference is correctly formatted.~~
