

Consultative Committee for Photometry and Radiometry (CCPR)

24th Meeting (19 - 20 September 2019)

Questionnaire on activities in radiometry and photometry

Reply from: METAS

Delegate: Dr. Peter Blattner

1. Summarize the progress in your laboratory in realizing top-level standards of:

- METAS has built up a calibration facility for Si-SPAD detectors at photon rates between 10 kHz to 200 kHz. The automatic system is based on several sets of fully characterized neutral density filters. With the system uniformity mapping of the detectors surface is possible in the wavelength range from 700 nm to 1000 nm. The new facility is used in the CCPR pilot study (WG-SP TG 11 Single-photon radiometry).
- METAS has built four new set-ups in the field of appearance: A fully automatic BRDF setup covering the spectral range from 390 nm to 800 nm. For the detection, a camera used allowing the definition of irregular shaped regions of interest of the sample in the range 50 μ m to 30 mm. The second systems allows the determination of spectral radiance factors at specific angles (10 detection angles and 3 illumination angles). The wavelength range and sample sizes are similar to the full BRDF system. Furthermore a spatial resolved diffuse reflectance system (geometries: $d_e/8^\circ$ and $d_i/8^\circ$) has been built with similar wavelength and sample size specifications than the BRDF system. Finally a primary gloss measurement system has been built according the requirements of different national and international measurement standards (ANSI, CIE,DIN).
- The optics laboratories have contributed to different EMPIR projects (SolarUV, photoLED, SURFACE, PhotInd, MIQC2, BiRD, BxDiff)
- A fully traceable system for the calibration of the Encircled Angular Flux (EAF) in step index multimode fibers was successfully developed, jointly with the industry partner Arden Photonics in the frame of the EMPIR 14 IND3 PhotInd project. A first Inter-comparison was already performed and further contributions to the normalization effort in this field will be carried out, depending on the industrial needs.
- A series of new artefacts for the calibration of the distance and of the attenuation scales, as well as for the reflectance scale of high-resolution reflectometers have been successfully developed and some of them are already now available for customer services.
- An optical frequency standard based on a stabilized compact femtosecond MIXSEL laser was successfully built and its application to the calibration of FTIR and of grating spectrometers was demonstrated.

- Different measurement techniques for the characterization of the optical properties of critical components and systems used in quantum communication systems have been developed in the frame of the EMPIR 14IN05 MIQC2 project and are now available for calibration services.

2. What work in PR has been/will be terminated in your laboratory, if any, in the past /future few years? Please provide the name of the institution if it has been/will be substituted by a DI or accredited laboratory.

none

3. What are present, new or emerging needs of users of your services that are not being supported sufficiently by current CCPR activities or initiatives? In the light of this information please suggest desirable changes in the future working program of the CCPR.

We observe an increased demand in calibration of spectroradiometers. In addition, there are requests for LED-based standards in photometry.

4. What priorities do you suggest for new research and development programmes at NMIs in the area of Photometry and Radiometry?

The topics are outlined in different roadmaps and research strategy (including EURAMET's Strategic Research Agenda for Metrology in Europe). Due to changes in the political agendas but also because of the real needs, the topic of Climate and Environment has become a priority for many research program. Several essential climate variables are related to photometry & radiometry but there are also new topics like light pollution.

5. Are there any research projects where you might be looking for collaborators from other NMIs or are there studies that might be suitable for collaboration or coordination between NMIs?

We are seeking for in informal intercomparisons the field of appearance, including BRDF, diffuse reflectance, multi-angle reflectance and gloss.

6. Have you got any other information to place before the CCPR in advance of its next meeting?

none

7. Bibliography of radiometry and photometry papers of your laboratory since the last CCPR (September 2014)?

Traceable instruments for Encircled Angular Flux measurements, Castagna, N., Morel, J., Robinson, E., Yang, H., Proc. SPIE, **10683** , 2018 , DOI: **10.1117/12.2306430**

The project « 562310-CITIZ-1-2015-1-HU-CITIZ-NT» was funded with the support of the European Union under the Programme "Europe for Citizens"

Applicable to the Strand 2 – Measure 2.2 "Networks of Towns"
Measure 2.3 "Civil Society Projects"
Strand 1 – "European Remembrance"

We had 6 events within the project's framework:

Event No1.:

Participation: the event made possible the meeting of 200 citizens:

100 persons Ajak, Hungary

25 persons Farkaslaka, Romania

25 persons Aheloy, Bulgaria

25 persons Hyzne, Poland

25 persons Tiszacsornyó, Slovakia

Location/Date: Ajak, Hungary 7-9 August 2015

Detailed description: the topic of the event is Debate and discussion: Students from the participating countries give a presentation on an EU wide topic followed by a discussion and debate it. The method gives students to improve their communication and rhetorical skills. Age group 14-23 yrs.

Venue: House of Culture, Hungary

Description: Each country delegates a 10 person team. the presentations are given in English that may be accompanied by other creative techniques (PowerPoint, music, singing etc.). A presentation is about 20 minutes long.

The teams processed a theme from the EU parliament's agenda: gave an objective overview of the topic followed by their opinion. Other teams reacted to it, expressing their own views and asking questions. The topics were listed by 13 July via email to avoid duplication of topics and allowing sufficient time for preparation.

Suggested topics: The Ukrainian-Russian war after the annexation of the Crimean peninsula, the European energy safety strategy, Climate change, Illegal migration etc. Topics may have been chosen from the European parliament's website

The following topics were debated:

Bulgaria, Aheloy — Migration with a difference

Hungary, Ajak — Free movement of goods within the EU

Romania, Farkaslaka — Is the new black green?

Poland, Hyzne — Tobacco products under control

Slovakia, Tiszacsornyó — The aspects of the monetary union, price stability

Event No 2.:

Participation the event made possible the meeting of 90 citizens:

20 persons Ajak, Hungary

20 persons Farkaslaka, Romania

15 persons Aheloy, Bulgaria

20 persons Hyzne, Poland

15 persons Tiszacsornyó, Slovakia

Location/Date: Farkaslaka, Romania, 4 September 2015.

Detailed description: The topic of the event was the renewable energy Conference on renewable energies: technological advancements and possible use of renewable energies with an emphasis on EU funding possibilities and a particular interest in local traditions of charcoal making. The participants detailed their achievements and plans and stressed that increased awareness is needed to conserve our natural heritage.

In Farkaslaka charcoal making is a long tradition. Still in the 1960's about 60% of the local population made its living from this labour intensive work. Over the years the settlement received a lot of critique as this was considered destructive. At this event locals tried to prove the contrary: new technologies were developed by the locals in the past 5 years, that participants could visit. The manager of the new facility as part of the conference described how emission is reduced and the by-product gasses are cleaned and used for generating electricity.

Event No 3.:

Participation the event made possible the meeting of 140 citizens:

55 persons Ajak, Hungary

20 persons Farkaslaka, Romania

20 persons Aheloy, Bulgaria

30 persons Hyzno, Poland

15 persons Tiszacsornyó, Slovakia

Location/Date: Ajak Hungary, 12 February 2016.

Detailed description: Drawing and essay contest

We advertised a drawing and essay contest titled "The youth's thoughts on the everyday life of the European Union" and "Equal opportunities in the European job market" for the age group of 14-23. The call was open from 10 August 2015 to 31 January 2016 followed by an exhibition and reading on 6 February 2016. The jury was delegated from the participating countries. The works were used as part of our communication.

Location: Tamási Áron School

Event No 4.:

Participation the event made possible the meeting of 120 citizens:

45 persons Ajak, Hungary

15 persons Farkaslaka, Romania

30 persons Aheloy, Bulgaria

15 persons Hyzno, Poland

15 persons Tiszacsornyó, Slovakia

Location/Date: Aheloy, Bulgária, 24-25 June 2016.

Detailed description:

Voluntary action: We organized an environmental protection action for volunteers where we created pictorial tableaux that formed the 'Path of Europe' in Aheloy's cultural centre. Pictures, drawings, objects helped us to gain knowledge on the environmental decision making of the union. Volunteering offers an outstanding opportunity for participants to take part in the life of various communities while gaining new skills and making new friends. Through the European Voluntary Service participants contribute to local communities not only in the EU but also in other continents, placements are open to all between 18-30 years. Volunteers receive no salaries but receive full refund of their costs.

Event No 5.:

Participation the event made possible the meeting of 120 citizens:

30 persons Ajak, Hungary

20 persons Farkaslaka, Romania

20 persons Aheloy, Bulgaria

35 persons Hyzno, Poland

15 persons Tiszacsornyó, Slovakia

Location/Date: Hyzno, Poland, 2-3 July 2016.

Detailed description:

European remembrance, European history: within the framework of the 14th Władysław Sikorski Day we organised a Cycling Competition and Tour, followed by a visit to the birthplace of General Władysław Sikorski and WW2 military exhibition.

Event No 6.:

Participation: the event made possible the meeting of 123 citizens:

43 persons Ajak, Hungary

20 persons Farkaslaka, Romania

15 persons Aheloy, Bulgaria

20 persons Hyzno, Poland

25 persons Tiszaesernyő, Slovakia

Location/Date: Tiszaesernyő, Slovakia, 29-30 July 2016.

Detailed description:

Walking lecture: Current security issues in the Schengen zone and the advantages of EU citizenship. While walking along the border facts and corresponding security issues were presented and discussed, the everyday work of Slovakian border police was demonstrated. The Schengen treaty is part of the first and third pillar of the EU that allows the abolition of inner border patrols and common protection of the outside borders. Not all member states are part of the treaty and there are non-EU members too.
