ACB-kædemotor - frit konfigurerbar - CDC-1-ACB

24 V DC / Tilpasset efter kundeønsker

Elektrisk motor til integreret, usynlig montering i vinduesprofilen og til eftermontering.

Praktisk til motoriseret åbning og lukning af vinduer og lemme.

Kan bruges til Komfortopluk, røgudluftning og brandventilation iht. DS/EN12101-2

Kan kombineres med alle D+H låsemotorer.

Egenskaber:

Integreret, frit parameterbar slukningselektronik for at forhindre en defekt i tilfælde af overbelastning af vindue og motor.

Integreret grænseflade ACB (Advanced Communication Bus) med åben Modbus RTU-protokol.

Direkte integration af motoren gennem åben buskommunikation via ACB (Advanced Communication Bus), f.eks. i CTS (bygningautomation).

Lav driftsstøj takket være innovativ, akustisk afkobling af drevkomponenterne.

Højpræcisionsmotor og synkron elektronik til synkron drift af op til 8 motorer.

Korrosionsbeskyttet, hærdet, stål-kæde, vedligeholdelsesfri takket være livstidssmøring.

Highspeed-funktion (-HS) til hurtigt opluk af vinduer i tilfælde af brand (ABV).

Justerbart, flertrins klembeskyttelsessystem (løbetid, kraft, åbning).

Automatisk aflastning af tætningsbåndet efter lukning beskytter tætningslister.

Lavt kabelforbrug med mulighed for gennemsløjfning af op til 3 motorer.

Enkel installation takket være stik med beskyttelse mod omvendt polaritet.

Tilslutning valgfrit mulig fra venstre eller højre (forsyning inkl. bussignaler).

Kan parametriseres individuelt via D+H SCS-software.

Funktionsbeskrivelse ACB

Sikker ABV-central kommunikation gennem krypteret dataoverførsel mellem centraler og motorer fra D+H Mechatronic AG.

Direkte styring af motoren via ACB mulig.

Som standard er motoren indstillet med drift med pol-skift fra fabrikken.

Præcis styring af position og feedback, herunder angivelser af den faktiske position.

Åbne- og lukke meddelelser kommer direkte fra motoren via ACB-kommunikation.

Motorens generelle status, som f.eks. samlet kørestrækning, antal aktiveringer, diagnostik og nødfunktion, kan evalueres.

Udvidelsesfunktioner:

Option "SBD/SBU" - Korrosionsbeskyttet, hærdet stål-kæde i sidebue-design til lave karmhøjder

Invoices and Payments

	Frequency: Agency Defined	SOP#: SOP-ETMS-Finance-01
	Issue Date: May 2021	

Option "ZB" - Vindebroanvendelse til sidemontering af motoren på vinduet

Option "CP" - Brugertilpasset motorfunktionsprogrammering såsom løbetid, kraft og åbning

Option "HP" - Åbningsprogrammering

Option "VP" - Signal til forbindelse med D+H BSY+ låsemotorer

Option "KM" - Kraftig motor-gear-enhed med øget kraft (op til 400 N) til at åbne og lukke tunge parallelsprossede og hæve-/sænkevindue/tophængte vinduer.

Option "LS" - Lavhastigheds-programmering i LUKKET-retning til 5 mm/s

Option "SA" - "Afbryder ÅBEN" endepositionsmeddelelse

Option "SZ" - "Afbryder LUKKET" endepositionsmeddelelse

Option "SA-SZ" - "Afbryder ÅBEN" og "Afbryder LUKKET" endepositionsmeddelelse

Option "AS2" - Akustisk signal i overensstemmelse med beskyttelsesklasse 2 i henhold til MaschRL/42/EG

Option "AS3" - Akustisk signal i overensstemmelse med beskyttelsesklasse 3 i henhold til MaschRL/42/EG

Option "SKS" - Mulighed for direkte tilslutning af en klembeskyttelsesliste eller en optisk sensor til overvågning af lukkekanten på motoren

Option "specialfarve" - lakering til perfekt integration i facadens udseende i henhold til RAL, DB, NCS

Tekniske data:

Forsyning: 24 V DC / $\pm 15\%$

Strømforbrug:

0,6 A (til 350 mm åbning)

0,8 A (til 500 + 600 mm åbning)

1 A (til 700 mm åbning)

1 A (til 800 - 1300 mm åbning)

Indkoblingstid: 30 % (TIL: 3 Min. / FRA: 7 Min.)

Udkobling: Integreret elektronisk belastningsafbryder

Konfiguration: Main eller Sub

Design: Højre eller venstre

Trykkraft: 250 N

Trækkraft: 250 N

Nominel låsekraft **: 1500 N

Levetid: 20000 dobbeltooperationer *

Åbning: 300 mm - 1300 mm

Hastighed ÅBNE: 6,7 mm/s

Hastighed ÅBNE - ABV:

Vigtige noter:

Denne produktbeskrivelse udgør ikke et udbud. Ansvar for overensstemmelse med udbudsretlige krav påhviler den udbudsgivende projektant eller arkitekt.

Montering og ibrugtagning skal ske i henhold til producentens anvisninger.

Med forbehold for tekniske ændringer.

I. Purpose

~~This procedure provides an overview of how transit agency Accounts Payable (A/P) clerks process vendor invoices and payments utilizing Avail's Enterprise Transit Management Software (ETMS) Accounts Payable (AP) solution. A/P departments can efficiently manage cash flow, process outstanding invoices, make vendor payments, and financial posting through automation. Accounts payable is a critical function to every enterprise. Therefore, these procedural steps are applicable to any A/P staff member responsible for invoice and payment activities performed within the ETMS system, where A/P data is processed and preserved.~~

II. Operational Impact and Metrics

~~*Operational Impact:* Relying on ETMS AP to automate an A/P department's processes help to derive operational efficiency across the accounts payable lifecycle. Adopting the solution can enhance vendor relationships, secure early payment discounts, and improve the agency's A/P staff efficiency, accuracy, and productivity.~~

~~*Metrics:* A/P operational and financial performance, and productivity indicators can be monitored and measured against best practice industry standards in various areas, for example:~~

- ~~• Current ratio (liquidity ratio)~~
- ~~• Financial burn rate~~
- ~~• Average total processing time of an invoice~~
- ~~• Average cost for processing an invoice~~
- ~~• Days payable outstanding~~
- ~~• Number of early payment discounts received vs. Missed~~

Invoices and Payments

	Frequency: Agency Defined	SOP#: SOP-ETMS-Finance-01	
	Issue Date: May 2021		

Distribution Code	Allows for reports to be generated to further define subcategories within the selected general ledger (GL) account number.
Discount Code- Percentage	Percentage of the discount the vendor allows if paid within the discount days.
Discount Amount	Applicable discount sum if the vendor is paid within the discount days. Typically, in the AP module this field is automatically populated.
Payment Discount- Days	Number of days the invoice is due in order to receive a discount.
Applied Credit	Allows user to remove (by applying a credit for an invoiced amount) from an aging report when a debit and credit match, but the reference numbers do not due to different transactions.

	Issue Date: May 2021	

IV. Frequency

The accounts payable process begins when vendor invoices are received by the A/P department. Invoices are processed on an open invoice basis; however, the frequency of the accounts payable cycle is uniquely defined by each agency. Implementing a recurring accounts payable cycle, ensures the timely processing of vendor payments, and reduced end of month staff workloads while also avoiding late payments and late fees. Recurring expenses can be recorded automatically if established in a fixed expense file.

V. Roles and Responsibilities

Accounts Payable clerks are primarily responsible for the execution of the practices and procedure outlined in this SOP. The line-of-business manager or designee are responsible for the oversight of this procedure.

VI. Procedure

This procedure describes the high-level steps for a A/P clerk to follow when processing vendor invoices and payments in Avail's ETMS Accounts Payable (AP) module.

Accounts Payable (AP)

1. ~~Receive invoice from vendor/supplier~~
2. ~~If applicable, match the invoice to the purchase order (PO) with the cost and products listed or services rendered~~
3. ~~Capture the invoice data~~
4. ~~Code the invoice to the accurate invoice number~~
 - ~~Post to general ledger (GL) accounts~~
 - ~~If applicable, select GL Distribution code~~
5. ~~Process invoice approval~~
 - ~~Cash Requirements Journal (determinations)~~
 - ~~Due date~~
