

Topic list: ConsultationIntroduction

- Introduction of the lawyer.
- Role of the lawyer.
- Explanation of the right to legal assistance (and financing).
- Waiving the right.
- Confidentiality.
- Right to an interpreter and the process, if applicable.
- Right to information.
- Right to have a third person (and consulate if applicable) notified.
- Contact with other persons.
- Assessing fitness to be interviewed.
- Information on receiving medical care.
- Identifying and addressing client's immediate worries and specific needs.
- Explanation of the procedures concerning police detention.
- Possibilities to challenge the legality of arrest / police detention.
- Right of legal assistance during the interrogation.
- Objective of the interrogation.

Advice

- Gathering background information:
 - Personal details.
 - Personal circumstances: family, accommodation, employment, medical treatment.
 - Previous contact with the police.
 - Previous convictions, prison and probation.
 - Involvement with social services.
- Simple legal explanation of the offense.
- Obtaining client's version of the events.
- Information about the actual or potential evidence (disclosed by the police/likely to exist/likely to be obtained).
- Client's response to actual or potential evidence.
- Multiple suspects and conflicts of interest.
- Presenting the options and check that client understands the options.
- Obtaining and responding to client's preferences.
- Respective roles in the interview:
 - Lawyer's role in the interview.
 - Client's role in the interview.

- The interview procedure, set-up and stages.
- Advice on how client should handle the interview when she/he decided to remain silent.
- Advice on how client should handle the interview when she/he decided to (partly) respond to questions.
- Advice on how and when to seek lawyer's advice during the interview (including in private by asking for a pause in the interview).
- Tactics used by police to pressure client to speak and how to react to them (if relevant).
- Advice on other police investigative procedures (e.g. identification, searches, taking pictures) and the right of access to a lawyer in those situations.
- Reading and checking the written record of the interrogation (if exists in the given country).

Course of events at the police station

- Complaints by client.
- Requests by client.
- Possibilities to review detention.
- Course of events after consultation.

Three (or Infinite) Lenses: Translucent Still Life I

Kai Rands (PhD)

Description: A pair of folded sunglasses sits on a table in front of a round crystal clock with

roman numerals and a bottle of capsules. The base of the clock and the bottom of the pill bottle can be seen through the top of the sunglasses. Part of the pill bottle label can be seen: "Lith. . .300. . ."

Artist statement

The drawing prompts the viewer's contemplation of lenses on three different levels. (By lens, I mean a device that transforms the user's experience in some way and designates a focus.) First, disability studies serves as a lens. Simi Linton (1998) has noted that disability studies is "a prism through which one can gain a broader understanding of society and human experience" (p. 118).

Second, on a literal level, the drawing includes three translucent objects that serve as lenses. The textures of the clock, the bottle, and the sunglasses create a proliferation of lenses refracting the viewer's focus in numerous directions. On this literal level, the lenses interact with one another so that the viewer has multiple views. For example, the sunglasses influence the experience of viewing part of the clock and part of the bottle, and hence, the view of some of the pills.

On a third level, the three objects prompt the viewer to contemplate the ways in which the objects function as metaphorical lenses. Time, represented by the clock, has served as a lens shifting my own experience of disability and disablement as well as designating different focuses. The disability studies perspective that nondisabled folks are "not presently disabled" draws on the lens of time to frame experience. Moreover, by problematizing the nondisabled/disabled binary, disability studies theorists point out that someone can be concurrently disabled and (en)abled in various ways, proliferating the lenses of time in the present moment. The other two items are also personally significant to me. Moods, and thus mood stabilizing medication, serve as lenses that affect my experience of the world. The third object, sunglasses, enables certain experiences of the world during migraines. Just as on the literal level the lenses interact with one another, on the metaphorical level, the lenses are experienced in ways that interact. For example, the experience of migraine can prompt shifts in mood and shifts in mood can influence the experience of migraine. Both can influence one's experience of time.

Dr. Kai Rands is an independent scholar, artist, educator, and activist focusing on queer and trans studies and activism as well as disability studies and activism.
